Abstract (en)
[origin: EP1801923A1] A connector device (1) for connecting a cable (14) to an electronic card (2) in a shelf. The connector device comprises two connection members (11, 12) with connection points thereon, the two connection members being assembled together. The connection device may adopt an open position for allowing entry of the electronic card (2) between the two connection members (11, 12) and a closed position for performing electrical contact, said open position and said closed position are obtained independently of the position of the connector device with respect to the shelf and the electronic card, and the connector device (1) may be moved from one position with respect to the shelf to another position while having the cable (14) connected thereon.
