Abstract (en)  
[origin: WO2006035139A1] The inventive power supply system (1) comprises a ground placed power supply device (2) provided with at least one linear supply wire (7) connected to a voltage supply, a rail (6) comprising at least one zero reset conductor strip (8) and at least one protective profile in a flat L-shaped position profile masking the conductor wire. Said system also comprises an on-board current sensing device (3) comprising at least one movable sensing subassembly (38) comprising a power sliding contactor (41) and a zero volts sliding contactor (42) which are electrically connected to the vehicle load circuits and used for slidingly contacting the supply wire and the a zero reset conductor strip. Said invention is useful for manufacturers of public transport vehicles and the lines therefor.
