Abstract (en)
[origin: WO2006045410A1] The invention relates to a thread tensioning body (B) in the form of a regular truncated cone jacket (K) consisting of a thin-walled, at least radially elastic material based at least on plastic and/or metal. The interior face of a wall section (5) that runs continuously around the periphery defines a tensioning zone (Z). Said tensioning body consists of a flexible screen or mesh material (M), at least in the continuous wall section (5).
