Abstract (en)
[origin: WO2006029939A1] The invention relates to a fixing device (2) for mounting an antenna on a body part (4) provided with an opening (6), in particular to the roof (4) of a motor vehicle comprising an antenna base (8) which is provided with an anchor part (12) having a threaded bush (36) and is insertable into the opening (6) from an internal or lower surface of the body part (4) and a nut (40) screwable on the projected threaded bush (36) and makes it possible to fix the antenna base (8) to the external or the top face of the body piece (4), wherein the antenna base (8) is fixedly connected during screwing the threaded nut (40) by rotational locking between the anchor part (12) and an edge (42) of the opening (6) and by torsional stress a latching element (24) with the edge (42) of the opening (6) of the immovable body part. The devices (32, 70) makes it possible to lock the latching elements (24) in the locking position while screwing the threaded nut (40) and/or to remove the latching elements (24) while screwing off said threaded nut (40).
