Abstract (en)

[origin: WO2006040218A1] The invention relates to a system (1) for detecting and reproducing images, comprising a camera module (10) that encompasses an image sensor (11), a reproducing device (18), and a control device (17). The camera module (10) is provided with a memory module (14) for storing patterns and messages as well as a functional module (13) for superimposing patterns and/or messages stored in the memory module (14) on an image of the image sensor (11).
