Abstract (en)

A safety device (1), such as a safety harness, adapted to be worn by a person (2) when working at height comprises a connecting device (3) to be connected to a securing means (13, 18) at an attachment point (8) in the connecting device (3). Said attachment point (8) is arranged to be movable from a lower position relative to the user's (2) body to an upper position to be caused to move from said lower position to said upper position under the action of the load arising in the event of said person (2) falling.
