Abstract (en)
[origin: EP1803492A1] The game has modules (3, 4) with assembling orifices (31, 32, 41, 42) for introducing a screw (1) for assembling the modules to form a module stack between a head (10) of the screw and a nut (2). The nut has a stop (20) extended through a hollow sleeve (21) including an elastic external peripheral bead (211). The orifices are dimensioned to receive the sleeve. The bead surrounds the orifice (41) by adopting a radial expansion configuration after the sleeve is introduced in the orifices (31, 41) and axially compresses the stack for maintaining cohesion before the screw is introduced in the nut.
