Abstract (en)

[origin: EP1803559A1] One printing unit (8) has two configurations where the two blanket cylinders are pressed against each other and against the plate cylinders (24A-B) in the throw-on configuration and the blanket cylinders are spaced apart from each other in the throw-off configuration. In the throw-off configuration, the upper blanket cylinder (22A) is raised relative to its position in a throw-on configuration, and the lower blanket cylinder (22B) is lowered relative to its position in a throw-on configuration. The cylinders are moved by a support and movement mechanism (26).
