Abstract (en)

[origin: EP1803650A1] The container has a floor, side walls (1,2) and an upper wall (3) with a filler/emptying port (4) that can be closed tight and a handle (5) in one piece with the wall. A ventilation channel (6) extends out from the filler/emptying port under the upper wall and the container is manufactured in one piece by blow molding. The inner volume (7) of the handle has a flow connection to the ventilation channel at its end towards the filler/emptying port and opens at an upper region of the upper wall at the other end, while the ventilation channel opens into the container's interior beneath the handle.
