Abstract (en)
The object of the present invention is a handle for a demijohn neck of those which use a faucet cap, although it can be used in demijohns with any type of cap, where due to the presence of some means of rupture of the ring which is lodged on the neck of the demijohn, the handle can be released when it is no longer necessary to make use of it, because the location of these means of rupture facilitates the quick removal of the handle from the neck of the demijohn when it is desired to place said demijohn in a horizontal position for delivery of the liquid contained in its interior.
