Abstract (en)

[origin: EP1803657A1] It is disclosed a beverage delivery device in which an outer container of rigid material is designed to receive a further container (8) of flexible material inside it, which inner container (8) is adapted to be filled with the liquid to be delivered. Delivery means (10) for the inner container (8) allow selective drawing off or discharge of the beverage; the inner container (8) is made of flexible material and has a maximum filling volume bigger than the volume of the outer container (2) and is also made up of at least three distinct portions (80, 81, 82) suitably secured to each other to enable holding of the beverage, at least one of said portions being designed to abut against the bottom (3) of the outer container (2) during the step of filling the device.
