Abstract (en)  
[origin: EP1803658A1] The package has two wedging elements (14) mounted inside a case (3) by being arranged on sides opposite to the object. Each wedging element (14) is present in the shape of frame delimiting an opening covered of a flexible membrane (17) destined to be in contact with an object (2) by friction. The elements have attachments (22) or slits (23) cooperating respectively with complimentary slits or attachments presented by the case in a manner so as to maintain the object in position inside the case. An independent claim is also included for a method to ensure package of an object by suspension using wedging elements.
