Abstract (en)

[origin: EP1803927A2] The fuel injection valve has a housing with a holding body (8) with the throttle plate (30) resting on it. An actuator (23) acts via a hydraulic coupler (51) on the valve needle (12). A transition piece (25) of the coupler has a projection above the holding body, varying according to the tolerances for the component. A recess (48) in the throttle plate evens out the tolerances.
