Abstract (en)

[origin: WO2006038244A1] The present invention refers to a bracket used to fix doors to cabinet pull-out elements, which consists in a rectangular plate with a horizontal aligned series of threaded holes, of which one hole is used selectively to fix the plate to the frame of the pull-out element; the two ends of the plate being provided with two vertical wings, each of them with an aligned series of holes or slots to be used selectively to insert the screws used to fix the door to the plate.
