Abstract (en)
[origin: WO2006045566A1] The invention relates to a cold rolling machine (10) comprising a first displaceable rolling rod holder (22) and a second displaceable rolling rod holder (24), via which a first rolling rod (26a, b) and a second rolling rod (28a, b) of a pair of rolling rods can be displaced counter to each other in the guiding direction (x) and can be adjusted in an adjusting device (y) in a transversal manner in relation to the guiding direction (x) during a rolling step which broadens the fields of application. According to the invention, a tool retaining device (62), comprising a plurality of tool holders (64, 66a-c), is provided.
