Abstract (en)

[origin: WO2006030246A1] The present invention relates to improvements in or relating to child vehicle seats. In particular, it relates to child car seats of the first stage type which a baby is restrained in a seat which can be carried by means of an integral handle to and from the car. We describe a demountable child vehicle seat comprising a seat body (11) and a carrying handle (13), wherein the seat further comprises a child restraint harness (20) . The invention is characterised in that the vehicle seat further comprises a supplementary harness tensioning system (31, 52, 53) adapted to apply tension to the harness when the seat is used in an operative configuration in a vehicle and to disapply tension when the seat is in a demounted configuration.
