Abstract (en)

[origin: WO2006013591A1] Sailing and/or motor boat (1) with variable width consisting of a) at least two substantially parallel hulls (2a, 2b); b) connection means between such hulls consisting of at least one telescopic beam (12a, 12b, 13) suitable for varying the width of the boat (1) from a minimum width to a maximum width, and vice-versa; c) activation means suitable for transmitting a movement to such a telescopic beam (12a, 12b, 13) and d) living quarters (3) connected to such connection means and/or to the hulls (2a, 2b), characterised in that such living quarters (3) are suitable for having a walking surface (4) between the hulls (2a, 2b), whatever the width of the boat (1) at the time, consisting of at least one first part that is at an intermediate height between the level of the water and the height of the hulls (2a, 2b).
