Abstract (en)
[origin: WO2006035154A1] The invention relates to the use of a detergent composition that can generate a foam in an aqueous medium, based on at least one surface-active agent (S) which is selected from anionic surface-active agents, non-ionic surface-active agents or mixtures of same, for the purpose of cleaning or maintaining textiles or hard surfaces, and at least one aliphatic alcohol (AA) at C₈-C₂₂. According to the invention, the foams formed have an improved rheology and appearance (whiteness).
