Abstract (en)

[origin: WO2006049868A1] Polynucleotides are provided which are useful as amplification primers and hybridization probes for detecting BS106 target sequence in a test sample. The primers and probes can be employed in amplification based methods for detecting the presence of BS106 sequences in a test sample. Additionally, the primers and probes can be used to perform homogeneous, real time reverse-transcriptase polymerase chain reaction to detect BS106 target sequence in a test sample.
