Abstract (en)

[origin: WO2006045573A1] The invention relates to a pressure mechanism, particularly a sampling cooler, comprising an exterior jacket tube. At least one side of said pressure mechanism is closed with the aid of a lid element that fits into a conical expansion of the jacket tube by means of a conical taper. The lid element is joined to the pressure vessel via at least one securing element while being provided with a sealing element in the region of a conical taper.
