Abstract (en)

[origin: EP1806539A2] The system has an exhaust hood (4) and an exhaust duct (6) having respective couplings. When the system is mounted, the couplings automatically couple with each other in a coupling direction. The couplings are automatically aligned with each other by an aligning device having a cone-like guide. The first coupling is placed relative to the holder while the second is placed relative to the support (2) allowing the couplings to be movable in a direction perpendicular to the coupling direction. The holder has a plate closing the housing (6) toward the wall or ceiling when the system is mounted.
