Abstract (en)
[origin: EP1806706A1] The invention describes an anti-theft cabinet for entertainment and slot machines, intended to protect the coin collection box of said machines from vandalistic actions and theft. The anti-theft cabinet consists of a U-shaped envelopment body at the lower part closed at the front by a collapsible door, and it is provided with collapsible arms in the upper part, which arms can collapse in both horizontal and vertical planes as a result of a hinge intercalated between the branches of each arm, and a pin for linking each arm to the structure of the machine. The collapsible door and arms are provided with locking mechanisms which are formed by a double-acting cam actuated by a cylinder, by means of which movement is transmitted to two latches, these mechanisms being able to be actuated by means of the same key for the door of the coin collection box or the main door.
