Abstract (en)
[origin: WO2006045650A1] Disclosed is a device for preventing a collision or alleviating the consequences of a collision of a motor vehicle with an object. The position and speed of an object relative to one's own vehicle are determined by means of an object detecting sensory system, it is determined in accordance with said variables whether a collision is imminent, and emergency braking is triggered when an imminent collision has been identified. The driver's activity is evaluated and the point in time when the emergency braking is triggered can be modified according to the driver's activity.
