Abstract (en)
[origin: WO2006048142A2] Disclosed are low-dust or dust-free granulates/agglomerates for detergents or cleaning agents as well as coated aggregates having a core-shell structure for the detergent or cleaning agent sector and a method for forming such aggregates. The inventive aggregates allow active substances to be released in a finely adjustable manner, for example. The coated aggregates are easy to pour, flow freely, and do not agglutinate even after being stored for a long time. Also disclosed is a method for forming granulates, in which a certain granular material is provided in a mixer/granulator, said granular material being granulated/agglomerated by adding auxiliary granulating agents and specific particulate material. The obtained granulates are easy to pour, flow freely, and do not agglutinate even after being stored for a long time.
