Abstract (en)
[origin: WO2006048238A1] The present invention provides a device (5) for use in holding two surfaces of mineral wool material (2) together, the device comprising a belt (9), the belt having a first end and a second end with a pin (6) at each end wherein: the belt is flexible; and each pin is substantially rigid and is angled to comprise a connecting part (8) which is joined to the belt and an insertion part (7) wherein the angle between the connecting part and the insertion part is between 35 and 80[°]. The device of the present invention is particularly useful for holding two surfaces of insulation material together at a corner of a cavity wall.
