Abstract (en)

[origin: WO2006032331A2] The invention relates to a method for franking mail, whereby a franking mark is generated in a franking unit, transmitted to an operating unit, connected to the franking unit and printed out in a printing unit. The method is characterised in that a user interface is provided at the operating unit by the franking unit, and the printing out of the franking mark, generated in the franking unit and transmitted to the operating unit, is controlled by the user interface, whereupon the franking mark is printed exactly once on each piece of mail. The invention further relates to a device suitable for carrying out said method.
