Abstract (en)
[origin: EP1808370A1] The device has an operation unit for moving the device in translation between internal and external positions. An air supply/evacuation pipe (4) is connected to an inflatable element (100) by a connection (11) allowing the rotation of the device with respect to the pipe. The inflatable element has lengthened shape. An independent claim is also included for a method of protecting a boat hull by an inflatable device.
