Abstract (en)

[origin: EP1808379A1] A particularly shaped bottle cap 1 to be coupled with a snap action is proposed to cover bottles showing a standard threaded bottle-neck. Usually, said bottles are covered with threaded caps which are screwed on the bottle-necks. The present bottle cap has one or more protruding components 3 which position under the convexity of bottle-necks of a particular type in which the convexity is usually utilized to apply the seal of inviolability.
