Abstract (en)
A fabric winding machine is installed on a circular knitting machine to wind and collect an annular fabric (2) knitted by the circular knitting machine. It has a fabric splitting mode and a fabric non-splitting mode according to the characteristics of the fabric material. The fabric winding machine (1) includes a fabric directing means on which an arched bracket (13) or a fabric extending bracket (11) can be installed respectively corresponding to a fabric splitting mode or a fabric non-splitting mode. The fabric in the two modes can be collected on a fabric collection rod (22) through different fabric winding paths. By switching the two modes the large size fabric winding machine does not have to be disassembled in response to the fabric of different characteristics.
