Abstract (en)

[origin: EP1808559A1] The device has a sliding curtain (9) with a door-locking bolt (31) and a stub (41), where the bolt co-operates with a bar (11). The bar is displaced between a bolt locking position and a bolt release position when a flat bar (45) is vertical and horizontal respectively. A crank (71) is fixed, by one end, to an end near the bar and another end is connected by a cable (19) to an actuator (15) displacing the bar between locking and release position, where the actuator is remote from the bar.
