Abstract (en)

[origin: EP1808821A1] The system has a set of electronic keys each comprising an authorizable code distinct from authorizable codes stored in other keys of the set. The authorizable codes are individually allotted to each of several determined operators such that each authorizable code corresponds to a single determined operator. The code in the electronic key is read using a reader of a secondary locking module, and the read code is stored by an electronic control unit. An independent claim is also included for a method for implementing a safety system.
