Abstract (en)  
[origin: WO2006040674A1] This invention relates to an item of clothing with an accessory such as a badge for attachment to clothing and suitable accessories for the purpose. The badge provides a plastic main body portion having a printable surface on at least one side. An attachment portion is provided having a recess in which the main body portion can fit snugly together with a panel of a garment. The garment is trapped between the main body portion and the attachment portion when they are fitted from opposed sides of the garment panel. The fit between the main body portion and the attachment portion, once the garment panel is trapped there between, is sufficiently tight to hold the portions together in engagement. Alternatively magnetic portions may be used to ensure sufficient hold on the garment is maintained. Throughout, the badge is provided with artwork to cooperate with the artwork on the garment such that the use of different badges, different placements or different sides of two sided badges can alter the overall synergistic effect.
