Abstract (en)

[origin: WO2006032129A1] The present invention provides an apparatus for delivering a beverage under pressure from a container to a dispensing means. The apparatus has a heat exchanger, a tank for holding a quantity of a coolant fluid and a reservoir for holding a quantity of the beverage. The reservoir is located in the tank for submersion in the coolant fluid. A first conduit delivers the beverage from the container to the heat exchanger while a second conduit delivers beverage to the reservoir. A third conduit delivers beverage from the reservoir to the dispensing means. The invention allows for the delivery of cold beverage from the container over a distance to the dispensing means.
