Abstract (en)

[origin: WO2006012850A1] The invention relates to a method which uses a drop in pressure, which develops in the still water circuit when at least one dispensing point is connected to the still water circuit and is drawn off from the supply of liquids of said still water circuit. At this point, the drop in pressure in the supply network is used in order to supply at least one inline carbonator with liquid for the carbonation thereof, preferably tap water with CO₂, during the dispensing step.
