Abstract (en)
[origin: WO2006049562A1] A wall module (2) for a multistorey building extends essentially parallelly to a centre plane and has two essentially parallel short sides (6), an upper side (7) and an underside (8). The wall module (2) comprises at least two pillars (17, 18), which each essentially extends from the upper side (7) to the underside (8), a reinforcement (19) which extends between the pillars (17, 18) and is attached to the pillars (17, 18), and concrete (73) which at least partly encloses the reinforcement (19) and extends between the pillars (17, 18). The multistorey building with such wall modules and the method for production of such a wall module (2) is also described.
