Abstract (en)
[origin: WO2006026686A1] Provided herein are methods and systems for managing and using metadata in connection with data integration in an enterprise computing environment. Through an integrated user interface, a user may have enterprise-wide access to data integration services and underlying data. The interface may be structured around theworkflow of data integration system design and implementation, and may facilitate reuse and redesign of tools and jobs in the data integration environment. The interface may present platform-independent access to all of the data integration resources and data sources across an enterprise.
