Abstract (en)

[origin: US2005273363A1] The disclosure is directed to a method of facilitating a medical workflow. The method includes receiving patient data via a first user interface device; providing a first medical data entry interface to a second user interface device; and providing a second medical data entry interface to the second user interface device in response to the selection of one selectable item of at least two selectable items. The first medical data entry interface includes at least a portion of the patient data and at least two selectable items. Each selectable item of the at least two selectable items is associated with a different stage within the medical workflow. The second medical data entry interface is configured to receive data associated with the stage within the medical workflow associated with the one selected selectable item.
