Abstract (en)

[origin: WO2006031918A2] A casino table game transaction management system for a plurality of gaming tables each having a dealer station and at least one player station, the system including bill acceptor assemblies adapted for utilization at the gaming tables, the bill acceptor assemblies each including a bulk note feeder, a note transportation system, a note validator configured to identify characteristics of each note being passed therethrough by the transportation system, and a cash box adapted to receive and to store notes. The bulk note feeder is configured to allow a user to quickly insert a stack of notes into the intake opening. The notes are then passed to the note validator located underneath the table. The system also includes a casino computer configured to monitor transactions within the system via a network interconnecting each of the bill acceptor assemblies at the gaming tables to the casino computer.
