Abstract (en)

[origin: EP1657892A1] A method comprises the steps of: receiving an identifier (MSISDN; GROUP) defining an originating or destination party for a communication connection or a group to which the originating or destination party of the communication connection belongs; and selecting a sound reproduction position (r) responsive to the identifier (MSISDN; GROUP). The method may further comprise the step of generating a digital representation (S') of a paging signal (Sr) or a voice signal (Sp) used for the communication connection by applying a head-related transfer function (HRTF) with the sound reproduction position (r).
