Abstract (en)
[origin: EP1810931A1] A clamp (1) is designed to interlock on one hand a second member (10) of a container having an edge frame (11) bent to extend at a distance to and along an edge region of a first member (14) while creating a gap (15) between the edge frame and this member in an interlocked position, said edge frame being provided with an aperture (16) in a bent region thereof opening into said gap, and on the other a first member (14) of a container having a first engagement member (17). The clamp has engagement members (8, 9) engaging said first engagement member (17) and the edge frame while storing potential energy in said interlocked position.
