Abstract (en)

[origin: EP1811070A1] In a process to manufacture a hook and loop fastener, the looped section is formed by loops anchored in a mesh. The loops and mesh are formed together by two needles in combined operation. The simultaneous formation of mesh and loops takes place on a textile substrate. The number of loops formed depends on the number of needles in operation or left unoccupied. Each mesh section is associated with a further loop. Further claimed is a commensurate hook and loop fastener made of 15-50 den monofilament polyester, polyamide and/or polypropylene with or without Aloe Vera.
