Abstract (en)
[origin: US2008023502A1] The invention relates to a closure cap (1) with an outlet connection piece, which can be opened and closed by displacing a telescopic part (6) along a central axis of the closure and has a mouth portion (5), the telescopic part (6) being displaceable on the connection piece (4) while guided on the outside thereof, the closed position being latched and a closure stopper (9) being provided, molded onto the telescopic part (6) by means of cross-pieces (8) leaving throughflow openings (7). To provide a configuration enhancing its functional features but not requiring any significant additional expenditure, for instance with regard to a molding tool required, the invention proposes that the closure stopper (9) latching in the mouth portion (5) is molded on by means of cross-pieces (8) that run in superposed alignment with an end face (11 ') of the connection piece (4).
