Abstract (en)

[origin: WO2006035123A1] The invention relates to a sheeting element (1) for producing a reinforced mould panel for building construction which is substantially formed on the basis of two facings (2, 3) remote from each other in order to provide an insertion space (4) for a filler and bonding material. Each facing (2, 3) is provided, on one face thereof, with anchoring means (5) having, on the free ends thereof, means (6) for fastening to a truss reinforcement (7) oppositely interposed between said facings (2, 3), wherein said facing (2, 3) anchorage to the reinforcement (7) makes it possible to hold the facing (2, 3) in a remote position and oppositely to each other and to immobilise the reinforcement (7) at any predetermined fixed location of the space (4) for inserting a filler material. The invention is suitable, in particular for building swimming pools.
