Abstract (en)

[origin: WO2006053670A1] A method for operating a drive train of a motor vehicle during a shift in an unsynchronized main gearbox of a multi-group transmission. The invention is based on a method for carrying out a shift in an unsynchronized gearbox wherein synchronization is carried out by means of a drive machine. The aim of the invention is to provide a method wherein it is possible to engage a target gear even in emergency operation of the drive machine. According to the invention, the following steps are carried out: the clutch (12) is opened; a neutral position is set in the rear-mounted group (19); a target gear is engaged; a drive position is set in the rear-mounted group (19) and the clutch (12) is at least partially closed. Use in a motor vehicle.
