Abstract (en)
[origin: WO2006042972A1] The invention enables digital works combining fixed images, animated images, sounds and smells to be disseminated to an audience. The multisensory picture looks like a traditional art picture with a removable frame which is personalized in harmony with the work thus disseminated. A high-resolution flat electronic screen (1) occupies the space instead of the picture. Integrated devices enable sounds (2) and smells (3) chosen by the creators of the multisensory works to be disseminated. The invention activates human senses such as sight, hearing, smell and possibly touch, enabling viewers to experience strong emotions.
