Abstract (en)

[origin: EP1657706A1] A driver for controlling cells of an electrochromic display is disclosed. The driver is connected to each cell of the display which is to be controlled to drive each cell according to a charging state associated with the cell; and to provide a characteristic of a selected cell to a sensor. The driver can operate in a sense and a programming mode. In sense mode the driver determines the characteristic of a selected cell; and in programming mode the driver sets the charging state of the cells.
