Abstract (en)

[origin: EP1813518A2] In order to provide a technique effective in improving rider restraining performance of an airbag (121) in a motorcycle airbag system (120) to be mounted to a motorcycle (100), an airbag system (120) to be mounted to a motorcycle (100) is constructed such that the way of folding the airbag (121) is devised to set the fold release resistance of the rider-side airbag part (122) lower than that of the other part (123) of the airbag (121) in the early stage of the airbag (121) deployment.
