Abstract (en)
[origin: EP1813742A1] The driving latch lock (1) has a locking gear which is connected between the driving latch rod (8,9) and the locking nut whereby the locking nut is displaced from latch rod along the lock plate (4). The manipulation force works against the latch rod along the opening direction of the locking nut. The retracting movement of the latch rod takes place into the lock plate which is provided with a positive fitting support at the locking nut.
