Abstract (en)
[origin: EP1813766A2] The device has a material processing module (100) with a unit for pressing/stamping thread bores into adhesive welting and for printing a protective film in an adhesive surface of the adhesive welting. A channel is provided for receiving the welting, which is covered by a cover strip. A base arranged at the channel encompasses an edge of the welting. A rail machining module (200) has a mechanism for trimming a profile-section cover. A cord threading module has a clamping mechanism stretching a partially-manufactured shadow system that is axially-centered between two cord assembly units.
