Abstract (en)

[origin: JP2009082726A] <P>PROBLEM TO BE SOLVED: To provide a system for making access to a bone to deposit a therapeutic agent thereon. <P>SOLUTION: The instrument includes an elongated member 102 having lumens 202, 203 configured to provide access to an interior of a skeletal support structure. The elongated member, a first expandable structure 200, and a second expandable structure 201 disposed in the first expandable structure 200 are provided. The first and second expandable structures are configured so as to expand a void in the skeletal support structure and pass through the lumens of the elongated member. <P>COPYRIGHT: (C)2009,JPO&INPIT
